

A woman with dark hair, wearing a light-colored patterned blouse and dark blue jeans, is sitting on a light-colored sofa. She is looking down at a tablet computer she is holding in her hands. The background is a bright, blurred indoor setting with a window and some plants.

# Actions on document

Made by e-Boks. Convert information to action

# Convert information to action

e-Boks Actions on Document gives professional users a very powerful and flexible way to reach their customers.

With Actions on Document, e-Boks provides an easy way to handle payments, reminders, chat and much more in our familiar and secure environment.

In our quest to offer professional users more and more flexible solutions in an increasingly digital world, e-Boks Actions on Document comes as a digital multi-tool. With a simple setup based on recognisable interfaces and familiar implementation methods, senders can now make use of a very wide range of functions.

When the customer receives the letter in e-Boks, it is already clear that a special letter has landed in the inbox.

e-Boks Actions on Document inserts a button with a text of your choice in the text bar on the overview screen. This means that the customer is immediately prompted to take action!

The possibilities for customising the button text and the service the embedded link points to are almost limitless.

For your customers, this means an even easier everyday life, because with one click, they land exactly where they need to be: it's easy to book appointments, pay bills and much more.

For you as a sender, this means that the conversion rate will be higher and that important business parameters in relation to customers will be strengthened. For example, you will see fewer overdue invoices, better optimisation of working

hours, faster case processing and much more.

For the organisation, the increased communication will create stronger ties between you and the customer or supplier.

For many organisations, security of delivery and assurance of compliance with data protection laws are high on the list of requirements for customer and supplier contact.

For customers and suppliers, the re-advertising-free environment and the non-existence of phishing, GDPR compliance and convenience count highly.

e-Boks Actions on Document ensures delivery and GDPR compliance for your organisation, customers, and suppliers in a secure and ad-free environment.

# Sender benefits

## High opening rate

Our solution and presence in many markets for more than 20 years has shown that recipients are so confident in the importance and authenticity of the email, that almost everything is read.

## Quick responses

Once letters are opened, our senders find that customers respond. The high conversion rate and trust can lead to more satisfied users due to faster case handling, better cash flow because bills are paid on time, and much more.

## Full flexibility

Actions on Document adds a link on top of the letters you send to your customers. The link can point to your own systems or to your partners' systems. The choice is yours!

# End user benefits

## Effortless, direct action

The letters contain links that lead the customer directly to the desired action. In addition to the cover letter, the letter can contain attachments.

## Secure link

In digitally insecure times with fake websites and skilfully executed phishing attacks, everything is done from a secure and familiar platform. No phishing.

## Receive letters from authorised senders

All letters users receive come from senders they have approved themselves. No spam.

# Features and functions

e-Boks Actions on Document do not require large and complicated system integrations. The e-Boks solution you already use is capable to expand and improve your communication with your customers. But there is also the option to use the solution in our app.

## Your own services

Your organisation has business systems and processes that are used to manage your customer contact and engagement.

e-Boks Actions on Document connects services and business systems and brings the customer from information to action in an easy way.

## e-Boks Plus services

e-Boks Actions on document can also be used to activate Plus services: e-Boks Plus is a universe where companies can showcase their own services to e-Boks users, directly in the app.

You link to your own content in your own web pages or to dynamic content in Plus services.

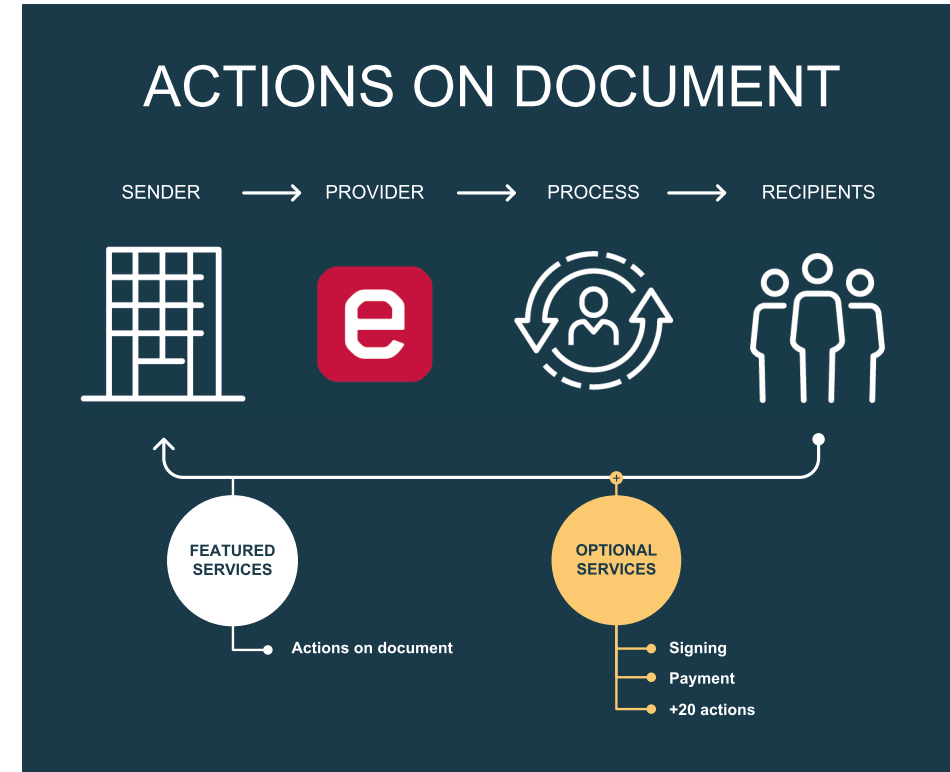

# Process

The process of integrating e-Boks Actions on Document can either be done via your current distributor or you can create it yourself via our REST interface.

Adding an action on a document requires only limited integration work. The most important steps are summarised below:

- Sender system must be extended with Actions on Document field
- Distributor needs to set up system
- At the right time, the letter with added actions is sent to the recipients. Sender generates a batch shipment with a link (action) to a payment module
- Depending on the type of message, the action must point to a service, which does not have to be an e-Boks service
  - Possible services include: payment, appointment booking, signing, acceptance of customer terms and many others
- Responses from recipients loop back to the sender.

If you want to link to an e-Boks Plus service, we provide an integration guide.

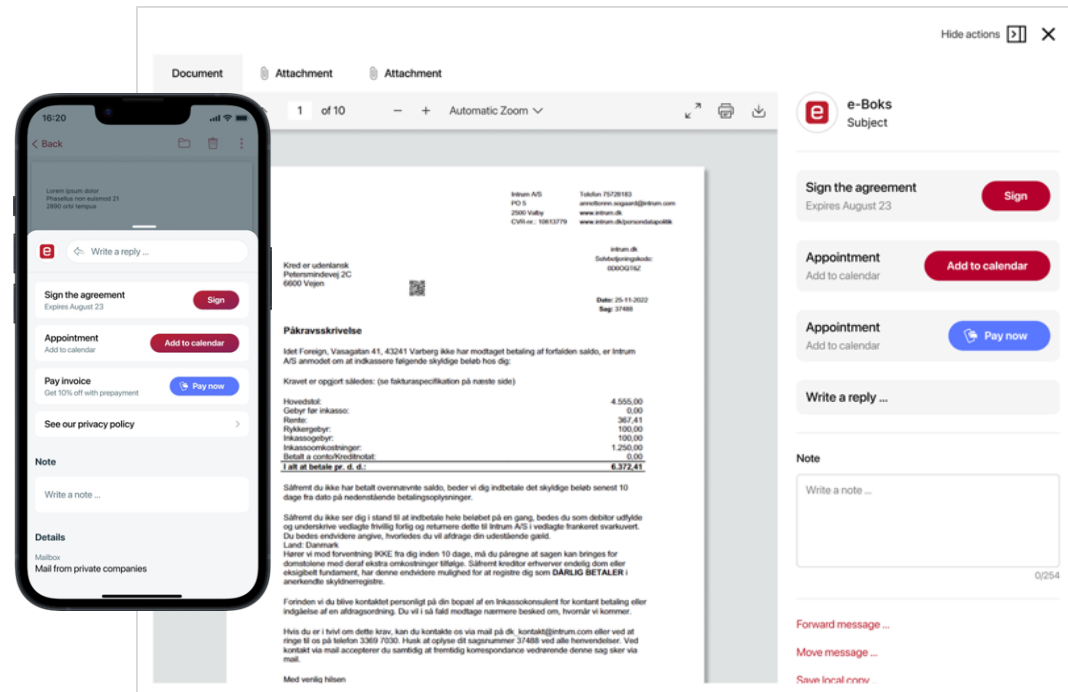

*Process overview for Actions on document.*

The next page shows examples of how a letter with links to a payment on a letter might look:

## Link to web and Plus from web or mobile phone

When the end user receives mail that has Actions on Document, a button will appear in on the mail in 'My overview'. To keep the user interface clean, e-Boks only shows 'Sign', 'Pay' and 'Pay now'. The rest of the available actions will only appear when the end user opens the document.

*Actions on Document on mobile and web respectively.*

When the recipient opens their mail in the digital mailbox, the selected actions are shown.

When the recipient clicks on an action, the following happens:

**For mobile:** The page the link points to opens.

**For web solution:** A warning message. As the recipient is leaving the secure environment, the recipient must accept before activating the link

The page the link points to opens.

## Link to Plus

If the recipient opens the link in our Plus app, the process is different.

When the end user logs into the mobile app and opens a message, the button is visible.

The sender (and partners) have the option to create services in the app. These services are the target of the URL solution.

When the end user clicks the button, the preferred service opens in e-Boks Plus.

If an end user opens a mail in the web solution, that must be opened in e-Boks Plus, a pop-up message will ask you to use a mobile device.

# About us

e-Boks is a trusted Nordic provider of secure platforms and digital postboxes.

We offer companies and public authorities a user-friendly, effective, intuitive, compliant and secure platform for digital communication.

Since 2001, e-Boks has empowered companies and governmental organisations to send millions of documents through the platform each year and bring their organisations into the digital age.

e-Boks helps businesses' communications meet the strictest global security standards; giving their customers the trust that their data is safe.

Today, we are an important infrastructural component across the globe, where we have passed more than 23 million users.
